

Exchange 2016: client does not have permission to send as this sender ...

The message does not appear completely but seems to be **“550 5.7.1 Client does not have permissions to send as this sender”**. Obviously the user does have the permissions (the user was the owner of the mailbox itself).

Run AdsiEdit and select the following path:

- Configuration - Services - Microsoft Exchange - <MY_ORG_NAME> - Administrative Groups - Exchange Administrative Group - Servers - <MY_SERVER_NAME> - Protocols - SMTP Receive Connectors:
- Properties of the “Client Proxy <MY_SERVER_NAME>” receive connector, “Security” tab and grant the “Accept Authoritative Domain Sender” allow permission for the “Authenticated users”.

Restart server
