

Highlight table rows using CSS

In order to highlight a table row without using javascript, use the following CSS code:

```
tr {background-color: #000000}  
tr:hover {background-color: #333333}
```

Or if you only want to highlight certain rows, use this CSS code:

```
tr.hl {background-color: #000000}  
tr.hl:hover {background-color: #333333}
```

And don't forget to add the 'hl' class to those rows.

Table:

```
<table>  
<tr>  
<td>C11</td>  
<td>C12</td>  
<td>C13</td>  
</tr>  
<tr class="hl">  
<td>C21</td>  
<td>C22</td>  
<td>C23</td>  
</tr>  
<tr class="hl">  
<td>C31</td>  
<td>C32</td>  
<td>C33</td>  
</tr>  
</table>
```
