Burn Windows ISO to USB

DDing ISO images to USB doesn't always work as intended. For example, Hiren's Boot CD will not boot. Windows ISO will not boot. While Rufus works great on Windows, there is no Linux version. Fortunately, there is WoeUSB which can be found in WebUpd8

```
sudo add-apt-repository ppa:nilarimogard/webupd8
sudo apt update
sudo apt install woeusb
```
