Clock synchronization on Mikrotik

Create a scheduler with 24-hour interval with the following code:

```
/system clock manual set dst-delta=+01:00 dst-end="jan/01/2020 00:00:00"
dst-start="jan/01/1970 00:00:00" time-zone=+01:00
/system ntp client set enabled=yes mode=unicast primary-ntp=192.168.1.12
```

Change 192.168.1.12 with IP of the NTP server you wish to use.
