Unlimited connections for Windows

This one is simple: Say you have more then 20 peeps and as much PCs that need access to a shared folder. No file server eh? Well, there's a way around it. You will break your client Windows OS EULA mind you, but sharing is caring so I consider this one being worth the risk.

Anyways, run Registry Editor (for those not knowing how, do this: press Windows Key + R, type "regedit" in the run command box and press Enter) and create a DWORD named **EnableConnectionRateLimiting** in **HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\Tcpip\Parameters**. Set Decimal or HEX value to 0 and you can share with the world!

Or just merge this into your Registry.

Always do a backup of same Registry before you change critical system functionality

```
Windows Registry Editor Version 5.00

[HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\Tcpip\Parameters]
"EnableConnectionRateLimiting"=dword:0
```

If you are to run **net config server** you'll still get 20 connections max on your Win 7 machine, but don't worry, that's just for show. It works as expected.

For all other questions regarding this topic leave as a comment bellow or start a topic in the forums! Cheers!
