

NIC Teaming and VLAN tag

Create virtual switch

```
New-VMSwitch -Name "SETSwitch" -AllowManagementOS $false -NetAdapterName  
"Eth1", "Eth2" -EnableEmbeddedTeaming $true
```

Create virtual adapter, connected to newly created switch

```
Add-VMNetworkAdapter -ManagementOS -SwitchName "SETSwitch" -Name  
"Management"
```

Set VLAN tag to newly created adapter

```
# Get adapter into variable  
$NIC1 = Get-VMNetworkAdapter -Name "Management" -ManagementOS  
# Set tag (to desired value)  
Set-VMNetworkAdapterVlan -VMNetworkAdapter $NIC1 -Access -VlanId 121
```

Set adapter IP address, and you're good to go
