

# Powershell commands

You can't run unsigned scripts if you don't enable execution of unsigned scripts. Consult with you sysadmin on this as it is essentially a security risk

```
set-executionpolicy unrestricted
```

- [Add domain user to local group](#)
- [Change AD user password using Powershell](#)
- [Create AD OU from powershell](#)
- [Create DNS records with PowerShell](#)
- [Create X.509 certificate via Powershell](#)
- [Download files with powershell](#)
- [Managing ActiveDirectory using PowerShell](#)
- [Managing Exchange using PowerShell](#)
- [NIC Teaming and VLAN tag](#)
- [Query all DiskControllers and its associated diskdrives](#)
- [Set folder ACL with Powershell](#)
- [Setup a Domain Controller with Windows 2016 Server Core](#)
