

Add AD group with long name as local group member

When you try to add an Active Directory group with name longer than 25 characters (in total), net.exe command will not work; but you can use the following VB script instead

```
Set objLocalGroup = GetObject("WinNT://./Administrators")
Set objADGroup1 = GetObject("WinNT://DOMAINNAME/DOMAINGROUPNAME")
objLocalGroup.Add(objADGroup1.ADsPath)
Set objLocalGroup = Nothing
Set objADGroup = Nothing
```
