

Activate Windows Server Core using CMD or PowerShell

```
slmgr.vbs -ipk <WINDOWS_SERIAL_NUMBER>  
slmgr.vbs -ato
```

```
$computer = gc env:computername  
$key = "AAAAA-BBBBBB-CCCCC-DDDDD-EEEEEE"  
$service = Get-WmiObject -Query "select * from SoftwareLicensingService" -  
ComputerName $computer  
$service.InstallProductKey($key)  
$service.RefreshLicenseStatus()
```
