

Delete orphaned DFS namespace

To removed an Orphaned DFS Namespace from a Windows domain infrastructure:

- launch adsiedit.msc
- locate the following path
 - default naming context
 - DC=domainname,DC.com
 - CN=System
 - CN=Dfs-Configuration
 - CN=NametobeRemoved

Once removed force a replication on all domain controllers.

```
repadmin /syncall
```

On each server that hosted a DFS replica for the computer to locate the new active directory configuration

```
dfsrdiag pollad
```
